```
This invention relates to novel protein complexes of the tumour necrosis factor-alpha (TNF-alpha) signalling pathway. Specifically, it refers to methods for preparing these complexes comprising at least two component proteins, as well as screening methods to identify modulators of the proteins, as well as screening methods to identify modulators of the pathway, which include antibodies, agonists and antagonists thereof. The pathway, which include antibodies, agonists and antagonists thereof. The clasmosing, prognosing or treating chronic inflammatory diseases such as septic shock and bacterial infections; neurological diseases such as serior shock and bacterial infections; neurological diseases such as stroke-induced inflammation in neurons; neurodegenerative diseases and cancer. Accordingly, these complexes can be used for the development of pharmaceutical compositions that exhibit antihilammatory, antiarthritic, antirheumatic, cytostatic and antibacterial activities and can be used for gene therapy purposes. In particular, the invention further provides is IRNA-oligonucleotides useful for inhibiting protein expression for in vitro or cell culture assays. This polypeptide is a human protein that can be used in combination with other proteins provided in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example; SEQ ID NO 3; 1980pp; English.
```

The invention provides a novel method of altering the activity of the protein kinase A (PKA) signaling pathway in a cell that comprises a tering the extent of phosphorylation of one or more PKA substrates, or kinase substrates downstream in the PKA signaling pathway. Pharmaceutical compositions containing a nucleic acid molecule that encodes a PKA compositions containing a nucleic acid molecule that encodes a PKA compositions containing a nucleic acid molecule that encodes a PKA composition by PKA can be used for treating a disorder exhibiting phosphorylation by PKA can be used for treating a disorder so a proliferative diseases. They can be used for treating e.g. HIV infection, AIDS, common variable immunodeficiency or cancers. Conditions in which upregulation of the PKA pathway is required, such as autoimmune disease, e.g. systemic lupus erythematosus, may also be treated. The present sequence represents a PKA subserate, wherein the subserate is in the Srcfamily, preferred the stream of the PKA PKA, PKA, Wark PKA, Wark

Fyk, Src-1 or Src-2

Altering the activity of protein kinase signaling pathways, used for treating immunosuppressive disorders, e.g. AIDS, proliferative disorders,

Claim 23; Page 95-96; 111pp; English. e.g. cancers or autoimmune diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                           related gene nucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a cut general assay. The nucleic acid is useful as diagnostic markers or therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, pancreas, prostate, skin and uterus). Wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in a colon of the processing and condendarily for identifying agents for treating these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                  The present invention describes an isolated nucleic acid molecule, which
                                                                                                                                                     New genes that are up-regulated or down-regulated in cancers, useful as markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.
                                                                                                                                                                                                                                             comprises the sequence of any of the genes that are up-regulated or d regulated in specific cancers (e.g. about 1031 genes up-regulated in acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; protein co-ordinate data; Lymphocyte Cell Kinase; Lck; enzyme; Src-family protein tyrosine kinase; T-cell; immune response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying a compound capable of diagnosing, preventing or treating AIDS or an HIV-related disorder comprises assaying the ability of the compound to modulate e.g. 1414, 1481 or 1553 nucleic acid expression or
                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a crystalline polypeptide (1), comprising the catalytic domain of human Lymphocyte Cell Kinase (Lck) protein. Lck is a Src-family protein tyrosine kinase expressed primarily in T-cells and plays an essential role in immune response. The present sequence is the full-length sequence of human Lck (1-509). (1) is useful for identifying a compound which is an inhibitor of human Lck protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AIDS; acquired immunodeficiency syndrome; human immunodeficiency virus; HIV-related disorder; differential expression; drug screening; viral replication modulation; diagnosis; prognosis; predisposition; anti-HIV; gene therapy; antiesnse therapy; human; proto-oncogene Tyr protein kinase LCK; enzyme.

The invention relates to a method of identifying a compound useful in the treatment of AIDS (acquired immunodeficiency syndrome) or an HIV (human immunodeficiency virus) related disorder. The invention involves assaying the ability of a test compound to modulate the activity or expression of 26 human proteins. These proteins and nucleic acids encoding them (ADE4022-ADE40473) are differentially expressed in tissues relating to AIDS or an HIV-related disorder compared to their expression in normal tissues. The invention also relates to the use of the compounds clanified to modulate viral replication in a cell and to treat a patient with AIDS or an HIV-related disorder. The invention further discloses methods for the diagnostic evaluation and prognosis of various HIV-related disorders, and for the identification of individuals exhibiting a predisposition to such conditions. The modulatory compounds identified using the method of the invention may be small organic molecules, the invention are useful in diagnosing, preventing or treating AIDS or HIV-related disorders. The present sequence represents a human protein which is differentially expressed in AIDS or HIV-related disorders.

ö The present invention relates to a method of identifying a candidate p21 or p53 pathway modulating agent. This comprises providing an assay system comprising a modulator of p21 or p53 (MP2153) polypeptide or nucleic acid, contacting the assay system with a test agent, where in its presence the system provides a reference activity, and detecting a test agent-biased activity of the assay system, wherein a difference between the test agent-biased activity and the reference activity identifies the test agent biased activity of the present invention are useful for the diagnosis and/or treatment of diseases or conditions associated with aberrant expression or activity of the p21 or p53 pathway, such as cancer, preferably colon or head and neck cancer. The present sequence is a human MP2153 protein sequence of the invention. Gaps ., 0 100.0%; Score 49; DB 8; Length 509; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Publicity (FBE-1005) to the EMBL/Genhank/Lobb databases.

-!-FUNCTION: Tyrosine kinase that plays an escential role for the mature T-cell function. Is constitutively associated with the mature T-cell function. Is constitutively associated with the cytoplasmic portions of the CD4 and CD8 surface receptors and plays a key role in T-cell antigen receptor (TCR)-linked signal transduction pathways. Association of the TCR with a peptide antigen-bound MHC complex facilitates the interaction of CD4 and CD8 with MHC class II and class I molecules, respectively, and thereby recruits the associated LCK to the vicinity of the TCR/CD3 complex. LCK then phosphorylates tyrosines residues within the immunoreceptor tyrosines-based activation motifs (ITPMS) in the cytoplasmic tails of the TCRgamma chains and CD3 subunits, initiating the TCR/CD3 signaling pathway. In addition, contributes to signaling by other receptor molecules. Associates directly with the cytoplasmic tail of CD2, and upon engagement of the CD2 molecule. LCK undergoes hyperphosphorylation and activation. Also plays a role in the IL2 receptor-linked signaling pathway that controls T-cell proliferative response. Binding of IL2 to its receptor results in increased activity of LCK. Is expressed at all stages of thymocyte development and is required for the regulation of maturation events that are governed by both pre-TCR and mature alpha beta TCR (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Copyrighted by the UniProt Consortium, see http://www.uniprot.org/terms Distributed under the Creative Commons Attribution-NoDerivs License

SUBUNIT: Binds to the cytoplasmic domain of cell surface receptors, such as CD2, CD4, CD5, CD8, CD44, CD45 and CD12. Also binds to effector molecules, such as P14K, VAV1, RASA1, FYB and to other proteins kinases including CDC2, RAF1, ZAP70 and SYK. Binds to phosphatidylinositol 3'-kinase (PT3K) from T lymphocytes through its SH3 domain and to the tyrosine phosphorylated form of KHDRBS1/p70 through its SH2 domain. Interacts with SQSTM1.

Interacts with phosphorylated LIME1. Interacts with CBLB (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

07-MAR-2006, entry version 13.
Proteoncogene tyrosine-protein kinase LCK (EC 2.7.1.112) (p56-LCK) (Lymphocyte cell-specific protein-tyrosine kinase).
Name=LCK;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULĀR LOCATION: Cytoplasmic and attached to the membrane. Present in lipid rafts in an unactive form (By similarity). DOMAIN: The SH2 domain mediates interaction with SQSTM1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: Belongs to the Tyr protein kinase family. Submitted (FEB-2004) to the EMBL/GenBank/DDBJ databases.
-- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is preliminary data.
-- FUNCTION: Plays a key role in the control of the eukaryotic cell cycle. It is required in higher cells for entry into S-phase and mitosis. Component of the kinase complex that phosphorylates the repetitive c-terminus of RNA polymerase II. Catalytic component of MPF (By similarity).
-- CAMANYIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tyrosine phosphate.
-!- SUBUNIT: Forms a stable but non-covalent complex with cyclin B in mature oocytes (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
07-FBB-2006, entry version 6.
Chromosome 14 SCAF15003, whole genome shotgun sequence. (Fragment)
ORFNames=GSTENG00030294001;
                                                                                                                   Terraodon nigroviridis (Green puffer).

tyrosine phosphate.

-!- ENZYME REGULATION: Regulated by phosphatases.
-!- SUBUNIT: Binds to the cytoplasmic domain of cell surface receptors, such as CD2, CD4, CD5, CD8, CD44, CD45 and CD122. Also binds to effector molecules, such as PI4K, VAVI, RASAI, FYB and to other proteins kinases including CDC2. RAFI, ZAPYO and SYK. Binds to phosphatidylinositol 3'-kinase (PI3K) from T lymphocytes through its SH3 domain and to the tyrosine phosphorylated form of KHDRSSI/PYO through its SH2 domain. Interacts with phosphorylated LIMEI. Interacts with Dhosphorylated LIMEI. Interacts with CBLB (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic and attached to the membrane. Present in lipid rafits in an unactive form (By similarity).
-!- TISSUE SPECIFICITY: Expressed specificaly in lymphoid cells.
-!- DEVELORMENTAL STAGE: Levels remain relatively constant throughout
                                                                                                                                                                                 Eukaryota, Metazoa, Chordata, Craniata; Vertebrata, Buteleostomi,

II; The three-dimensional solution structure of the SH2 domain from p55blk kinase."; Proverse of the SH2 domain from Biochemistry 35:6201-6211(1996).

-!- PUNCTION: May function in a signal transduction pathway that is restricted to B Lymphoid cells.
-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dymecki S.M., Niederhuber J.E., Desiderio S.V.; "Specific expression of a tyrosine kinase gene, blk, in B lymphoid

Sequences AAV43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance conscraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as interaction of a protein with other molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Prediction; secondary structure; alignment; evolutionary conservation; homology; periodicity; co-variation analysis; antigenic site; site directed mutagenesis; interaction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tumor antigen peptides which induce tumor-specific cytotoxic T-cells and polynucleotides encoding them for treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to peptides which are partial sequences of stor/lck family proteins. The present sequence is one such peptide. The peptides are useful for producing vaccines for the treatment of cancer, including colon cancer and small-cell lung cancer.
                                                                                                                                                                                                                                                                                               Src protein; lck protein; vaccine; colon cancer; small-cell lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Prediction; secondary structure; alignment; evolutionary conservation; homology; periodicity; co-variation analysis; antigenic site; site directed mutagenesis; interaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100.0%; Score 41; DB 4; Length 9; 100.0%; Pred.                                                                                                                           Sequences AAY43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as guides for site directed mutagenesis studies, and for understanding the interaction of a protein with other molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Designing a ligand binding to a target molecule, comprises identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .
